3D PRINTER

Photocentric

Proudly celebrating
20 years of innovation

Overview

Presenting the LC Magna, a 3D printer that can deliver significant speed, volume and cost savings to your business today!

Product Highlights

13.3mm per hour enabling large volumes of parts to be printed quickly, accurately and consistently.

With a large platform and build volume of 510 x 280 x 350mm a wide variety of parts can be easily produced.

Complemented by our own range of high performance resins, LC Magna delivers an unbeatable value proposition.

4K Screen 3840 x 2160px delivers the optimal large format printing experience.

Supports layer thicknesses between 25 to 250 microns, depending on the material, giving you the ideal balance of speed and resolution.

Photocentric's patented 'blow peel' release technology ensures reliability over large surface area printing

What Our Customers Say

"We simply had to have a look because the numbers almost seemed too good to be true. We're running at 100%. That's a massive jump from where we were with other machines."

Matt Everatt

Technical Director, Smileign & S4S

"Having an LC Magna 3D printer in-house that can deliver fast results has been fundamental to our efforts – it wouldn't be possible without this responsive technology."

Matt Mendez

Owner, LI Racing

"By working together with Photocentric and their LC Magna 3D printer we want to continue to push the boundaries in investment casting to make the impossible, possible for our customers, and their customers."

Lennart Van den Doel
