Description

Product Specifications

Ruland MDCD57-22-22-A is a clamp double disc coupling with 22mm x 22mm bores, 57.2mm OD, and 78.2mm length. It is zero-backlash and has a balanced design for reduced vibration at high speeds. The double disc design is comprised of two anodized aluminum hubs, two sets of thin stainless steel disc springs, and a center spacer allowing each disc to bend individually and accommodate all types of misalignment. MDCD57-22-22-A is lightweight and has low inertia making it well suited for applications with speeds up to 10,000 RPM. Hardware is metric and tests beyond DIN 912 12.9 standards for maximum torque capabilities. Ruland manufactures MDCD57-22-22-A to be torisionally rigid and an excellent fit for precise positioning stepper servo applications commonly found in semiconductor, solar, printing, machine tool, and test and measurement systems. It is machined from solid bar stock that is sourced exclusively from North American mills and ROHS3 and REACH compliant. MDCD57-22-22-A is manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Bore (B1)	22 mm	Small Bore (B2)
B1 Min Shaft Penetration	15.2 mm	B2 Min Shaft Penetration
B1 Max Shaft Penetration	37.0 mm	B2 Max Shaft Penetration
Outer Diameter (OD)	57.2 mm	Bore Tolerance
Length (L)	78.2 mm	Hub Width (LH)
Recommended Shaft Tolerance	+0.000 mm / -0.013 mm	Forged Clamp Screw
Screw Material	Alloy Steel	Hex Wrench Size
Screw Finish	Black Oxide	Seating Torque
Number of Screws	2 ea	Dynamic Torque Reversing
Angular Misalignment	2.0°	Dynamic Torque Non-Reve
Parallel Misalignment	0.30 mm	Static Torque
Axial Motion	0.76 mm	Torsional Stiffness
Moment of Inertia	1.885 x 10 ⁻⁴ kg-m ²	Maximum Speed

Installation Instructions			
	 Align the bores of the MDCD57-22-22-A double disc coupling on the shafts that are to be joined and determine if the misalignment parameters are within the limits of the coupling. (<i>Angular Misialignment:</i> 2.0°, <i>Parallel Misalignment:</i> 0.30 mm, <i>Axial Motion:</i> 0.76 mm) Fully tighten the M6 screw on the first hub to the recommended seating torque of 16 Nm using a 5.0 mm hex torque wrench. Before tightening the screw on the second hub, rotate the coupling by hand to allow it to reach its free length. Tighten the screw on the second hub to the recommended seating torque. Make sure the coupling remains axially relaxed and the misalignment angle remains centered along the length of the coupling. The shafts may extend into the relieved portion of the bore as long as it does not exceed the shaft penetration length of 37.0 mm.
