

BCK32-3/4"-16MM-A

Ruland BCK32-3/4"-16MM-A, 3/4" x 16mm Bellows Coupling, Aluminum, Clamp Style With Keyway, 2.000" (50.8mm) OD, 2.413" (61.3mm) Length

Description

Ruland BCK32-3/4"-16MM-A is a clamp bellows coupling with 0.7500" x 16mm bores, 2.000" (50.8mm) OD, 2.413" (61.3mm) length and 3/16" x 5mm keyways. It is zero-backlash and has a balanced design for reduced vibration at high speeds. BCK32-3/4"-16MM-A is comprised of two anodized aluminum hubs and a stainless steel bellows. The bellows are able to flex while remaining rigid under torsional loads allowing for all types of misalignment to be accommodated. This bellows coupling is lightweight and has low inertia making it suitable for applications with speeds up to 10,000 RPM. Hardware is metric and tests beyond DIN 912 12.9 standards for maximum torque capabilities. Ruland BCK32-3/4"-16MM-A has four convolutions allowing for high torsional rigidity and making it an excellent fit for precise positioning stepper servo applications as well as encoders. It is machined from solid bar stock that is sourced exclusively from North American mills and RoHS3 and REACH compliant. BCK32-3/4"-16MM-A is carefully manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Installation Instructions

- Align the bores of the BCK32-3/4"-16MM-A bellows coupling on the shafts that are to be joined and determine if the misalignment parameters are within the limits of the coupling. (*Angular Misialignment*: 2.0°, *Parallel Misalignment*: 0.010 in (0.25 mm), *Axial Motion*: 0.020 in (0.50 mm))
- 2. Fully tighten the M5 screw on the first hub to the recommended seating torque of 9.5 Nm using a 4.0 mm hex torque wrench.
- 3. Before tightening the screw on the second hub, rotate the coupling by hand to allow it to reach its free length.
- 4. Tighten the screw on the second hub to the recommended seating torque. Make sure the coupling remains axially relaxed and the misalignment angle remains centered along the length of the coupling.
- 5. The shafts may extend into the relieved portion of the bore as long as it does not exceed the shaft penetration length of 1.099 in (27.9 mm).
