Figure 1-1 Z-turn Board

The [Z-turn Board](#) is a low-cost and high-performance Single Board Computer (SBC) built around the Xilinx Zynq-7010 (XC7Z010-1CLG400) or Zynq-7020 (XC7Z020-2CLG400) All Programmable System-on-Chip (SoC) which is among the Xilinx Zynq-7000 family, featuring integrated dual-core ARM Cortex-A9 processor with Xilinx 7-series Field Programmable Gate Array (FPGA) logic.

The Z-turn Board takes full features of the Zynq-7010 or 7020 SoC, it has 1GB DDR3 and 16MB QSPI Flash on board and a set of rich peripherals including USB-to-UART, Mini USB OTG, 10/100/1000Mbps Ethernet, CAN, HDMI, TF, JTAG, Buzzer, G-sensor and Temperature sensor. On the rear of the board, there are two 1.27mm pitch 80-pin SMT female connectors to allow the availability of 96 (for 7010) or 106 (for 7020) user I/O and configurable as up to 39 LVDS pairs I/O.

The Z-turn Board is capable of running Linux operating system. MYIR has provided Linux 4.14.0 SDK, the kernel and many drivers are in source code. MYIR also provides a MYIR-PYNQ project to support Python development on the Z-turn Board. The board is delivered with complete accessory kit including two USB cables, one Ethernet cable, one HDMI cable, one 16GB TF card and one 5V power adapter and product CD-ROM which enables you to start the development quickly when getting the board out-of-the-box. MYIR also offers optional USB camera module and an IO extension board [Z-turn IO Cape](#), which brings out many peripherals and signals like ADC, GPIO, LCD and camera interfaces to help you explore more functions from the Z-turn Board.

The Z-turn Board is an excellent development platform for evaluating and prototyping for Zynq-7000 SoC. It can also be used as a System-on-Module (SOM) for your next embedded design; typical applications are Industrial Automation, Test & measurement, Medical Equipment, Intelligent Video Surveillance, Aerospace and military, etc.

**Hardware Specification**

The Zynq-7000 AP SoC leverages the 28nm scalable optimized programmable logic used in Xilinx’s 7 series FPGAs. Each device is designed to meet unique requirements across many use cases and applications. The Z-7010, Z-7015, and Z-7020 leverage the [Artix®-7 FPGA](#) programmable logic and offer lower power and lower cost for high-volume applications. The Z-7030, Z-7035, Z-7045, and Z-7100 are based on the [Kintex®-7 FPGA](#) programmable logic for higher-end applications that require higher performance and high I/O throughput.
