

## OF-MSP-12E-AN

Ruland OF-MSP-12E-AN, 0.7500" International Shaft Collar With OD Flats And Holes, Anodized Aluminum, Two-Piece Clamp Style, 40mm OD, 15mm width

### Description

Ruland OF-MSP-12E-AN is a two-piece shaft collar with a 0.7500" bore, 40mm OD, and 15mm width. It is an international series shaft collar that has metric hardware and dimensions with inch bores. OF-MSP-12E-AN has OD flats and tapped holes for mounting shaft collars to each other or adjacent components. The clamp style design does not mar the shaft, is easy to remove, and is indefinitely adjustable. OF-MSP-12E-AN is commonly used for guiding, spacing, stopping, mounting, and component alignment. Equipment manufacturers benefit from the tightly controlled face to bore perpendicularity (TIR of ? .05mm). Perpendicularity is critical for alignment when the shaft collar is used as a load bearing face, mechanical stop, or for mounting components such as gears or bearings. Proprietary processes have been developed by Ruland to maintain superior fit, finish, and holding power. OF-MSP-12E-AN is stamped with the Ruland name and bore size for ease of identification. Halves are mated throughout the manufacturing process for proper fit and alignment. Forged screws test beyond DIN 912 12.9 standards to ensure maximum holding power. OF-MSP-12E-AN is machined from solid bar stock to a fine burr free finish and sourced exclusively from North American mills. Ruland uses high grade 2024 aluminum with an anodized finish for increased screw seating torque and added corrosion resistance. It is RoHS3 and REACH compliant and manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

### Installation Instructions

1. Use the OF-MSP-12E-AN international series shaft collar as it is received.
2. Wipe the bore clean.
3. Apply a thin coat of light oil to the shaft.
4. Place the collar onto the desired shaft location and tighten it using a 5.0 mm hex wrench until a slight resistance is felt.
5. Be sure to maintain the gap between the two halves of the collar during installation.
6. Wring collar into its final position and tighten the screw to the full recommended seating torque of 9.6

Nm using a 5.0 mm torque wrench.
