

Snap-on Hub for TT Motor

PRODUCT ID: 3769

Sprockets, wheels, and gears, oh my! We really like our DC gear motors (a.k.a "TT Motor") but unless you have a 3D printer it can be a challenge to get something attached to the axle. That's why we've got this TT Motor Hub – it snaps onto the end and gives you two big flanges with holes. It's a very good solution to quickly and easily mount custom wheels, cardboard & wood, or other mechanisms to your robot project. We have tested these that they won't slip on the shaft! A wonderful, wee component you never knew you needed!

Comes 1 x per order

TECHNICAL DETAILS

Dimensions: 34 x 15 x 15mm

Mounting Holes: ~26mm

Mounting Hole Diameter: 4.2mm

Product Dimensions: 34.0mm x 15.0mm x 15.0mm / 1.3" x 0.6" x 0.6"

Product Weight: 1.3g / 0.0oz
