

MDCSK57-30-20-A

Ruland MDCSK57-30-20-A, 30mm x 20mm Single Disc Coupling, Aluminum, Clamp Style With Keyway, 57.2mm OD, 58.8mm Length

Description

Ruland MDCSK57-30-20-A is a clamp single disc coupling with 30mm x 20mm bores, 57.2mm OD, 58.8mm length, and 8mm x 6mm keyways. It is zero-backlash and has a balanced design for reduced vibration at high speeds. The single disc design is comprised of two anodized aluminum hubs and two sets of thin stainless steel disc springs which can accommodate angular misalignment and axial motion, however does not allow for any parallel misalignment. MDCSK57-30-20-A is lightweight and has low inertia making it well suited for applications with speeds up to 10,000 RPM. Hardware is metric and tests beyond DIN 912 12.9 standards for maximum torque capabilities. Ruland manufactures MDCSK57-30-20-A to be torisionally rigid and an excellent fit for precise positioning stepper servo applications commonly found in semiconductor, solar, printing, machine tool, and test and measurement systems. It is machined from solid bar stock that is sourced exclusively from North American mills and RoHS3 and REACH compliant. MDCSK57-30-20-A is manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Product Specifications

30 mm	Small Bore (B2)	00
	Siliali Bole (BZ)	20 mm
8 mm	Keyway (K2)	6 mm
26.7 mm	B2 Max Shaft Penetration	27.6 mm
57.2 mm	Bore Tolerance	+0.03 mm / -0.00 mm
58.8 mm	Hub Width (LH)	26.7 mm
+0.000 mm / -0.013 mm	Forged Clamp Screw	M6
Alloy Steel	Hex Wrench Size	5.0 mm
Black Oxide	Seating Torque	16 Nm
2 ea	Dynamic Torque Reversing	12.73 Nm
1.0°	Dynamic Torque Non-Reversing	25.45 Nm
0.00 mm	Static Torque	50.9 Nm
0.38 mm	Torsional Stiffness	113.0 Nm/Deg
1.464 x 10 ⁻⁴ kg-m ²	Maximum Speed	10,000 RPM
Yes	Balanced Design	Yes
TW:BT-4C-3/8-140	Recommended Hex Key	Metric Hex Keys
Yes	Material Specification	Hubs: 2024-T351 Aluminum Bar, Disc Springs: Type 302 Stainless Steel
-40°F to 200°F (-40°C to 93°C)	Finish Specification	Sulfuric Anodized MIL-A-8625 Type II, Class 2 and ASTM B580 Type B Black Anodize
Ruland Manufacturing	Country of Origin	USA
0.665600	UPC	634529206492
8483.60.8000	UNSPC	31163008
Stainless steel hubs are available	upon request.	
Torque ratings are at maximum misalignment.		
Performance ratings are for guidance only. The user must determine suitability for a particular application.		
Torque ratings for the couplings are based on the physical limitations/failure point of the disc springs. Under normal/typical conditions the hubs are capable of holding up to the rated torque of the disc springs. In some cases, especially when the smallest standard bores are used or where shafts are undersized, slippage on the shaft is possible below the rated torque of the disc springs. Keyways are available to provide additional

Installation Instructions		
	 Align the bores of the MDCSK57-30-20-A single disc coupling on the shafts that are to be joined and determine if the misalignment parameters are within the limits of the coupling. (<i>Angular Misialignment:</i> 1.0°, <i>Parallel Misalignment:</i> 0.00 mm, <i>Axial Motion:</i> 0.38 mm) Fully tighten the M6 screw on the first hub to the recommended seating torque of 16 Nm using a 5.0 mm hex torque wrench. Before tightening the screw on the second hub, rotate the coupling by hand to allow it to reach its free length. Tighten the screw on the second hub to the recommended seating torque. Make sure the coupling remains axially relaxed and the misalignment angle remains centered along the length of the coupling. The shafts may extend into the relieved portion of the bore as long as it does not exceed the shaft penetration length of 26.7 mm for bore 1 and 27.6 mm for bore 2.
