

MAX9509/MAX9510 Evaluation Kits

General Description

The MAX9509/MAX9510 evaluation kits (EV kits) are fully assembled and tested surface-mount PCBs that evaluate the MAX9509/MAX9510 ICs. The MAX9509/ MAX9510 EV kits amplify standard-definition video signals and set the video output black level near ground. while consuming minimal power. The EV kits operate from a 1.7V to 2.625V single power supply.

The MAX9509 EV kit has an additional internal reconstruction filter that typically has ±1dB passband flatness of 8.1MHz, 3dB attenuation at 10MHz, and a 46dB attenuation at 27MHz. Both MAX9509/MAX9510 EV kits provide an internal fixed gain of 8V/V and accept an input full-scale video signal of 0.25VP-P (nominal), providing an output full-scale video signal of 2 V_{P-P} (nominal).

Component List

DESIGNATION	QTY	DESCRIPTION	
C1, C2	2	1μF ±10%, 10V X7R ceramic capacitors (0603) Murata GRM188R61A105K TDK C1608X7R1A105K	
C3	1	0.1µF ±10%, 16V X7R ceramic capacitor (0603) Murata GRM188R71C104K TDK C1608X7R1C104K	
C4	1	10μF ±20%, 6.3V X5R ceramic capacitor (0805) Taiyo Yuden JMK212BJ106MG TDK C2012X5R0J106M	
C5	0	Not installed, ceramic capacitor (0603)	
JU1	1	3-pin header	
R1, R2	2	75Ω ±1% resistors (0603)	
R3	1	0Ω ±5% resistor (0603)	
U1	1	See the EV Kit-Specific Component List	
IN, OUT	2	BNC 75Ω PCB vertical mount connectors	
	1	Shunts	

Features

- ♦ Single 1.7V to 2.625V Power-Supply Operation
- ♦ DC-Coupled Input with Option for AC-Coupling
- **♦ DC-Coupled Output**
- ♦ Video Output Black Level Set Near Ground
- ♦ Reconstruction Filter with ±1dB Passband to 8.1MHz and 46dB Attenuation at 27MHz (MAX9509)
- ♦ Internal Preset Gain of 8V/V
- ♦ 10nA Shutdown Current
- ♦ 8-Pin TDFN Package (MAX9509), 8-Pin µMAX® Package (MAX9510)
- **♦ Surface-Mount Components**
- ◆ Fully Assembled and Tested
- ♦ Lead-Free and RoHS Compliant

Ordering Information

PART TEMP RANGE		IC PACKAGE	
MAX9509EVKIT+	0°C to +70°C*	8 TDFN-EP** (2mm x 2mm x 0.8mm)	
MAX9510EVKIT+	0°C to +70°C*	8 µMAX	

⁺Denotes a lead-free and RoHS-compliant EV kit.

MAX9509/MAX9510 Evaluation Kits

Quick Start

Recommended Equipment

- 1.7V to 2.625V, 500mA DC power supply (VDD)
- · Video signal generator
- Video measurement equipment (e.g., Tektronix VM-700T)

Procedure

The MAX9509/MAX9510 EV kits are fully assembled and tested. Follow the steps below to verify board operation. **Caution:** Do not turn on the power supply until all connections are completed.

- 1) Verify that a shunt is installed across pins 2-3 of jumper JU1 (EV kit enabled).
- Connect the power supply ground to the GND pad on the EV kit.
- 3) Connect the 1.7V to 2.625V supply to the VDD pad on the EV kit.
- 4) Connect the output of the video signal generator to the IN BNC connector on the EV kit. The video signal must be biased such that the sync tip is at ground.
- 5) Connect the OUT BNC connector on the EV kit to the input of the video measurement equipment.
- 6) Set the video signal generator for the desired video input signal.
- 7) Turn on the power supply and enable the video signal generator.
- 8) Analyze the video output signal with the VM-700T video measurement equipment.

Detailed Description

The MAX9509/MAX9510 EV kits are fully assembled and tested surface-mount PCBs that evaluate the MAX9509/MAX9510 ICs. The MAX9509/MAX9510 amplify and set the video output black level near ground for standard-definition video signals, while consuming minimal power. The EV kits operate from a 1.7V to 2.625V single power supply.

The MAX9509 EV kit has an additional internal reconstruction filter that smoothes the steps and reduces the spikes on the video signal from the video digital-to-analog converter (DAC). The reconstruction filter typically has ±1dB passband flatness of 8.1MHz, 3dB attenuation at 10MHz, and 46dB attenuation at 27MHz.

Both MAX9509/MAX9510 EV kits provide an internal fixed gain of 8V/V and accept an input full-scale video signal of 0.25V_{P-P} (nominal), providing an output full-scale video signal of 2V_{P-P} (nominal).

Video input and output signals from the EV kits are DC-coupled, eliminating large DC-blocking capacitors. The input of each EV kit has a 75Ω termination to ground and the output has a 75Ω back-termination resistor.

The input of the MAX9509/MAX9510 EV kits can be directly connected to the output of a video DAC. The MAX9509/MAX9510 also feature a transparent input sync-tip clamp, allowing AC-coupling of input signals with different DC biases.

Jumper Selection

Shutdown Mode (SHDN)

Jumper JU1 controls the shutdown mode (SHDN) of the MAX9509/MAX9510 EV kits. The shutdown mode turns off the sync-tip clamp, filter (MAX9509), amplifier, charge pump, and linear regulator, and reduces the IC's quiescent supply current to 10nA (typ). See *Table 1* for JU1 jumper selection.

Table 1. JU1 Jumper Selection

SHUNT POSITION	SHDN PIN	EV KIT FUNCTION
1-2	Low	Disabled
2-3*	High	Enabled

^{*}Default position.

AC-Coupled Input

By default, the MAX9509/MAX9510 EV kits are set for a DC-coupled input. However, these kits are configured for an AC-coupled input as well. To change the setting to AC-coupled, remove R3 and install a $0.1\mu F$ ceramic capacitor across the C5 pads.
