

RJ Connector Interface Modules

The IMRJ Series of standard interface modules provide a transition from popular multi-pin connectors, RJ11 and RJ45, to standard terminal blocks for ease of wiring. The IMRJ Series is equipped with a series of plated through holes to enable the addition of axial leaded components in a circuit. For example, filtering devices can easily be added to the IMRJ Series.

TYPICAL SCHEMATIC

Component mounting holes located on each trace at 0.1" centers allow customers to insert components in parallel or series. To place a component in series customer removes trace (A) between component mounting holes under added component. The traces are located on the bottom side of the printed circuit board.
