

Black Multi-Hub Wheel for TT / Lego or N20 Motor – 65mm Diameter

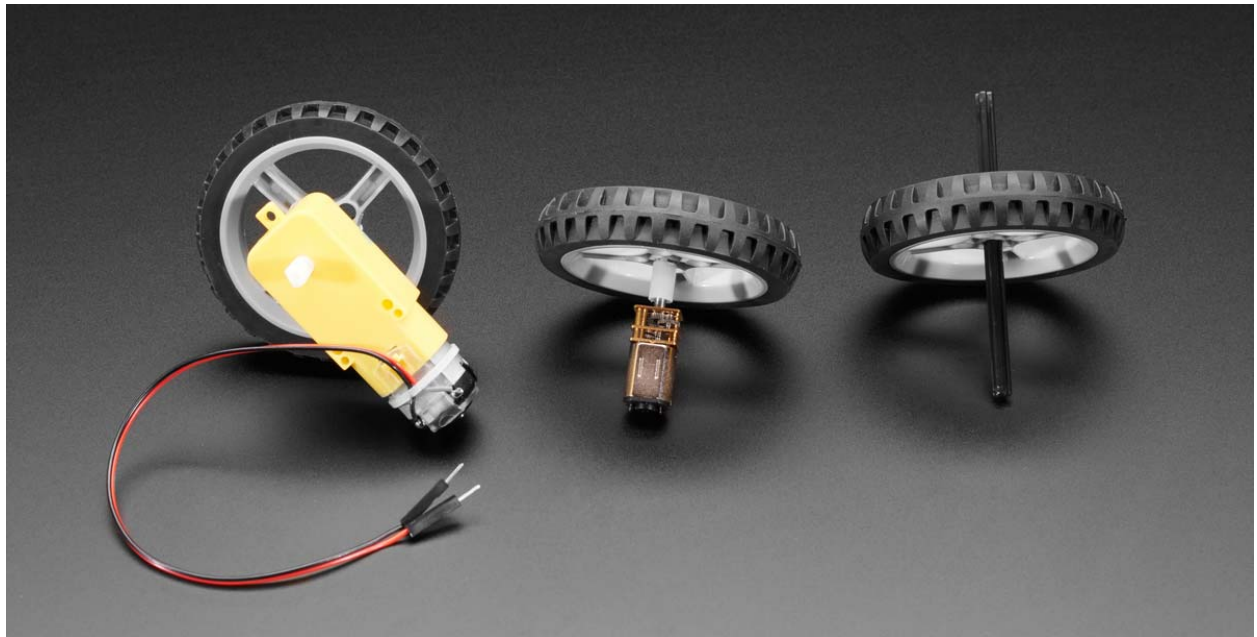

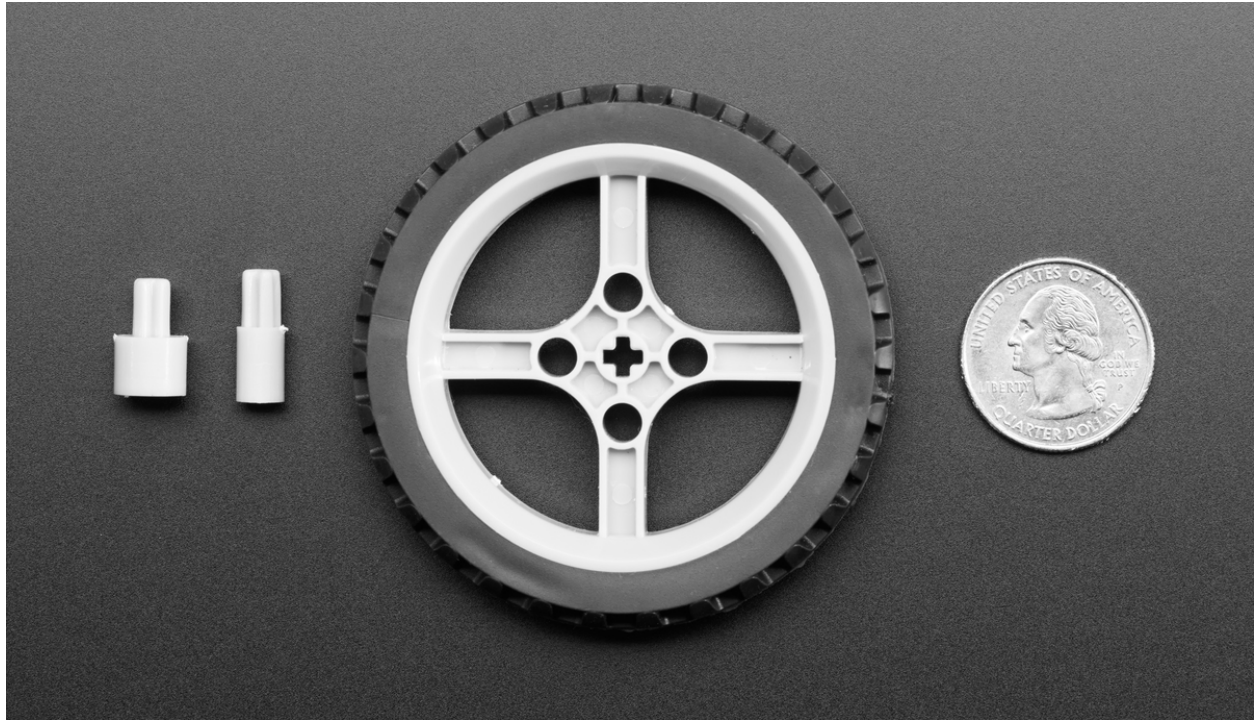

PRODUCT ID: 4205

This Multi-Hub Wheel is solid, a lil' chunky, but it won't make your robot bulky. It even comes in Adafruit black! Each order comes with one wheel and two different sized hubs to make connecting super quick and easy. The hubs may come attached to the wheel with a little plastic flashing, so you'll want diagonal cutters to trim them out or you can twist them out

The real magic with this wheel is that you can use it with a wide range of motors! Compatible with [TT Motors](#), 'N20' DC geared motors, and LEGO cross-pieces. Really, this is a universal wheel for any purpose.

TECHNICAL DETAILS

- TT motor/LEGO hub: 5.4 x 3.5mm
- DC/N20 geared motor hub: 2.8mm diameter
