

DCD21-13MM-3/8"-A

Ruland DCD21-13MM-3/8"-A, 13mm x 3/8" Double Disc Coupling, Aluminum, Clamp Style, 1.313" (33.3mm) OD, 1.770" (45.0mm) Length

Description

Ruland DCD21-13MM-3/8"-A is a clamp double disc coupling with 13mm x 0.3750" bores, 1.313" (33.3mm) OD, and 1.770" (45.0mm) length. It is zero-backlash and has a balanced design for reduced vibration at high speeds. The double disc design is comprised of two anodized aluminum hubs, two sets of thin stainless steel disc springs, and a center spacer allowing each disc to bend individually and accommodate all types of misalignment. DCD21-13MM-3/8"-A is lightweight and has low inertia making it well suited for applications with speeds up to 10,000 RPM. Hardware is metric and tests beyond DIN 912 12.9 standards for maximum torque capabilities. Ruland manufactures DCD21-13MM-3/8"-A to be torisionally rigid and an excellent fit for precise positioning stepper servo applications commonly found in semiconductor, solar, printing, machine tool, and test and measurement systems. It is machined from solid bar stock that is sourced exclusively from North American mills and RoHS3 and REACH compliant. DCD21-13MM-3/8"-A is manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Tariff Code	8483.60.8000	UNSPC	31163008			
Note 1	Stainless steel hubs are available upon request.					
Note 2	Torque ratings are at maximum misalignment.					
Note 3	Performance ratings are for guidance only. The user must determine suitability for a particular application.					
Note 4	Torque ratings for the couplings are based on the physical limitations/failure point of the disc springs. Under normal/typical conditions the hubs are capable of holding up to the rated torque of the disc springs. In some					

cases, especially when the smallest standard bores are used or where shafts are undersized, slippage on the shaft is possible below the rated torque of the disc springs. Keyways are available to provide additional torque capacity in the shaft/hub connection when required. Please consult technical support for more assistance.

Installation Instructions

- 1. Align the bores of the DCD21-13MM-3/8"-A double disc coupling on the shafts that are to be joined and determine if the misalignment parameters are within the limits of the coupling. (*Angular Misialignment*: 2.0°, *Parallel Misalignment*: 0.008 in (0.20 mm), *Axial Motion*: 0.016 in (0.40 mm))
- 2. Fully tighten the M3 screw on the first hub to the recommended seating torque of 2.1 Nm using a 2.5 mm hex torque wrench.
- 3. Before tightening the screw on the second hub, rotate the coupling by hand to allow it to reach its free length.
- 4. Tighten the screw on the second hub to the recommended seating torque. Make sure the coupling remains axially relaxed and the misalignment angle remains centered along the length of the coupling.
- 5. The shafts may extend into the relieved portion of the bore as long as it does not exceed the shaft penetration length of 0.842 in (21.4 mm).
