

Low-Voltage Supervisory Circuit

Description

This device was designed to provide all the operational features of the SG1543/2543/3543 devices with the added advantage of uncommitted inputs to the voltage sensing comparators. This allows monitoring of voltage levels less than 2.5 volts by dividing down the internal reference supply.

In all other respects, the SG1544 series is identical to the SG1543 series. These monolithic devices contain all the functions necessary to monitor and control the output of a sophisticated power supply system. Over-voltage sensing with provision to trigger an external SCR "crowbar" shutdown; an under-voltage circuit which can be used to monitor either the output or sample the input line voltage; and a third op-amp/comparator usable for current sensing are all included in this IC, together with an independent, accurate reference generator.

The voltage-sensing input comparators are identical and can be used with threshold levels from zero volts to V_{IN} (3V). Each has approximately 25mV of hysteresis which is offset so the switching differential threshold is zero on the non-inverting input for rising levels and zero on the inverting input for falling signals. All other operating characteristics are as described in the SG1543 data sheet and application note.

Features

- Uncommitted Comparator Inputs for Wide Input Flexibility
- Common-Mode Range from Zero to Near Supply Voltage
- Reference Voltage Trimmed to 1% Accuracy
- Over-Voltage, Under-Voltage, and Current Sensing Circuits all included
- SCR "Crowbar" Drive of 300mA
- Programmable Time Delays
- Open-Collector Outputs and Remote Activation Capability
- Total Standby Current Less Than 10mA

High Reliability Features

- Available to MIL-STD-883, ¶ 1.2.1
- MSC-AMS level "S" Processing Available

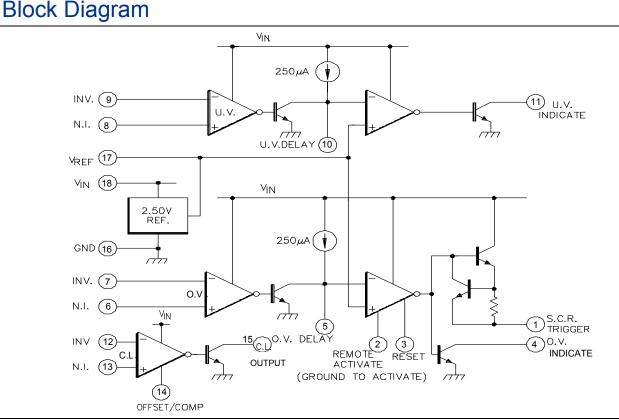

Figure 1 - Block Diagram

Absolute Maximum Ratings (Note 1)

| I | Input Supply Voltage (+V _{IN}) | 40V |
|---|--|-------|
| | Sense Inputs | |
| ; | SCR Trigger Current (Note 2) 30 | 00mÄ |
| I | Indicator Output Voltage | . 40V |

Note 1. Values beyond which damage may occur.

Note 2. At higher input voltages, a dissipation limiting resistor, $\rm R_{g}$ is required. See Figure 2.

Thermal Data

| J Package: |
|--|
| Thermal Resistance-Junction to Case, θ_{JC} |
| Thermal Resistance-Junction to Ambient, θ _{JA} 70°C/W |
| N Package: |
| Thermal Resistance-Junction to Case, 0, IC |
| Thermal Resistance-Junction to Ambient, θ _{.IA} |
| DW Package: |
| Thermal Resistance-Junction to Case, θ _{JC} |
| Thermal Resistance-Junction to Ambient, θ _{IA} |
| 0,1 |

| Indicator Output Sink Current 50mA |
|---|
| Operating Junction Temperature |
| Hermetic (J Package) 150°C |
| Plasitc (N, DW Packages) 150°C |
| Storage Temperature Range65°C to 150°C |
| RoHS Peak Package Solder Reflow (40 sec. max. exp.)260°C (+0, -5) |

Note A. Junction Temperature Calculation: $T_J = T_A + (P_D x J_A)$.

Note B. The above numbers for θ_{JC} are maximums for the limiting thermal resistance of the package in a standard mounting configuration. The θ_{JA} numbers are meant to be guidelines for the thermal performance of the device/pc-board system. All of the above assume no ambient airflow.

Recommended Operating Conditions (Note 3)

| Input Supply Voltage (+V _{IN}) | 4.7V to 40V |
|--|----------------------------|
| Current Limit Common Mode | |
| Input Voltage Range | 0V to +V _{IN} -3V |
| Reference Load Current | 0 to 10mA |
| Indicator Output Voltage | 4.7V to 40V |
| Indicator Output Current | 0 to 10mA |

| Delay Timing Capcitor (Note 4) | 0 to 1µF |
|-------------------------------------|----------|
| Operating Ambient Temperature Range | |
| SG154455°C | to 125°C |
| SG254425°C | to 85°C |
| SG3544 0°C | to 70°C |
| | |

Note 3: Range over which the device is functional.

Note 4. Larger value capacitor may be used with peak current limiting. See Figure 2.

Electrical Characteristics

(Unless otherwise specified, these specifications apply over the operating ambient temperatures for SG1544 with -55°C $\leq T_A \leq 125$ °C, SG2544 with -25°C $\leq T_A \leq 85$ °C, SG3544 with 0°C $\leq T_A \leq 70$ °C, and +V_{IN} = 10V. Indicator outputs have 2k Ω pull-up resistors. All electrical ratings and specifications are tested with the inverting over-voltage input and the non-inverting under-voltage input externally connected to the 2.5V reference. Low duty cycle testing techniques are used which maintains junction and case temperatures equal to the ambient temperature.)

Note 5. Input voltage rising on O.V. N.I. INPUT and falling on U.V. INV. INPUT.

Application Information

The 100 ohm resistor (R_G) limits the peak discharge current into the SG1544 while the external PNP transistor provides a high peakcurrent discharge path for the delay capacitor.
