

BCK36-20-16-A

Ruland BCK36-20-16-A, 1 1/4" x 1" Bellows Coupling, Aluminum, Clamp Style With Keyway, 2.250" OD, 3.235" Length

Description

Ruland BCK36-20-16-A is a clamp bellows coupling with 1.2500" x 1.0000" bores, 2.250" OD, 3.235" length and 1/4" x 1/4" keyways. It is zero-backlash and has a balanced design for reduced vibration at high speeds. BCK36-20-16-A is comprised of two anodized aluminum hubs and a stainless steel bellows. The bellows are able to flex while remaining rigid under torsional loads allowing for all types of misalignment to be accommodated. This bellows coupling is lightweight and has low inertia making it suitable for applications with speeds up to 10,000 RPM. Hardware is metric and tests beyond DIN 912 12.9 standards for maximum torque capabilities. Ruland BCK36-20-16-A has four convolutions allowing for high torsional rigidity and making it an excellent fit for precise positioning stepper servo applications as well as encoders. It is machined from solid bar stock that is sourced exclusively from North American mills and RoHS3 and REACH compliant. BCK36-20-16-A is carefully manufactured in our Marlborough, MA factory under strict controls using proprietary processes.

Bore (B1)	1.2500 in	Small Bore (B2)	1.0000 in				
Keyway (K1)	1/4 in	Keyway (K2)	1/4 in				
B1 Max Shaft Penetration	1.496 in	B2 Max Shaft Penetration	1.496 in				
Outer Diameter (OD)	2.250 in	Bore Tolerance	+0.004 in / +0.001 in				
Length (L)	3.235 in	Length Tolerance	+/- 0.030 in				
Hub Width (LH)	1.050 in	Recommended Shaft Tolerance	+0.0000 in / -0.0005 in				
Forged Clamp Screw	M6	Screw Material	Alloy Steel				
Hex Wrench Size	5.0 mm	Screw Finish	Black Oxide				
Seating Torque	16 Nm	Number of Screws	2 ea				
Dynamic Torque Reversing	132 lb-in	Angular Misalignment	2.0°				
Dynamic Torque Non-Reversing	265 lb-in	Parallel Misalignment	0.012 in				
Static Torque	530 lb-in	Axial Motion	0.030 in				
Torsional Stiffness	1200 lb-in/Deg	Moment of Inertia	0.5522 lb-in ²				
Maximum Speed	10,000 RPM	Full Bearing Support Required?	Yes				
Zero-Backlash?	Yes	Balanced Design	Yes				
Torque Wrench	TW:BT-4C-3/8-140	Recommended Hex Key	Metric Hex Keys				
Material Specification	Hubs: 2024-T351 Aluminum Bar Bellows: Type 321 Stainless Steel	Temperature	-40°F to 200°F (-40°C to 93°C)				
Finish Specification	Sulfuric Anodized MIL-A-8625 Type II, Class 2 and ASTM B580 Type B Black Anodize	Bellows Attachment Method	Ероху				
Manufacturer	Ruland Manufacturing	Country of Origin	USA				
Weight (lbs)	0.680800	UPC	634529308530				
Tariff Code	8483.60.8000	UNSPC	31163018				
Note 1	Stainless steel hubs are available upon request.						
Note 2	Torque ratings are at maximum misalignment.						
Note 3	Performance ratings are for guidance only. The user must determine suitability for a particular application.						
Note 4	Torque ratings for the couplings are based on the physical limitations/failure point of the metal bellows. Under normal/typical conditions the hubs are capable of holding up to the rated torque of the metal bellows. In some cases, especially when the smallest standard bores are used or where shafts are undersized, slippage on the shaft is possible below the rated torque of the metal bellows. Keyways are available to provide additional torque capacity in the shaft/hub connection when required. Please consult technical support for more						

Installation Instructions

- 1. Align the bores of the BCK36-20-16-A bellows coupling on the shafts that are to be joined and determine if the misalignment parameters are within the limits of the coupling. (*Angular Misialignment*: 2.0 °, *Parallel Misalignment*: 0.012 in, *Axial Motion*: 0.030 in)
- 2. Fully tighten the M6 screw on the first hub to the recommended seating torque of 16 Nm using a 5.0 mm hex torque wrench.
- 3. Before tightening the screw on the second hub, rotate the coupling by hand to allow it to reach its free length.
- Tighten the screw on the second hub to the recommended seating torque. Make sure the coupling remains axially relaxed and the misalignment angle remains centered along the length of the coupling.
- 5. The shafts may extend into the relieved portion of the bore as long as it does not exceed the shaft penetration length of 1.496 in.
