# EVQ3364-R-00A

36V, 150mA, 4-Channel, Boost WLED Driver with 15000:1 Dimming Ratio and I<sup>2</sup>C Evaluation Board, AEC-Q100 Qualified

#### DESCRIPTION

The EVQ3364-R-00A is an evaluation board designed to demonstrate the capabilities of the MPQ3364, a four-channel step-up converter designed to drive white LED (WLED) arrays as backlighting for small or mid-sized liquid-crystal display (LCD) panels.

Peak-current control is used as the pulse-width modulation (PWM) control architecture for regulating the boost converter. Four channelcurrent sources are applied to the LED cathode to adjust the LED brightness. This regulates the current in each LED string to the value set by an external current-setting resistor, with 2.5% current regulation accuracy between strings. The maximum current per channel is 150mA.

The MPQ3364's low on resistance MOSFET and low headroom voltage design improves efficiency. The device also has a standard digital  $I^2C$  interface for easy flexibility. The switching frequency ( $f_{SW}$ ) can be configured via a resistor,  $I^2C$  interface, or external clock.

The MPQ3364 features three dimming modes: analog dimming, PWM dimming, and mixed dimming via the PWM input. The dimming mode can be selected via the I<sup>2</sup>C interface or MIX/AD pin. The IC also has a phase shift function that eliminates noise during PWM dimming.

Protection features include over-current protection (OCP), over-voltage protection (OVP), over-temperature protection (OTP), LED short protection, and LED open protection. The LED current automatically decreases at high temperatures.

The MPQ3364 is available in a QFN-24 (4mmx4mm) package.

#### **ELECTRICAL SPECIFICATIONS**

| Parameter                   | Symbol          | Value     | Units |
|-----------------------------|-----------------|-----------|-------|
| Input voltage               | V <sub>IN</sub> | 12        | V     |
| Output voltage              | VLED            | <50       | V     |
| LEDs                        |                 | 4 strings |       |
| LED current (per<br>string) | ILED            | 50        | mA    |

### FEATURES

- 3.5V to 36V Input Voltage Range
- 4 Channels with 150mA Max per Channel
- Internal 100mΩ, 50V MOSFET
- Up to 2.2MHz Configurable Switching Frequency (f<sub>SW</sub>)
- Optional f<sub>SW</sub> Follows the External Clock
- Multiple Dimming Modes through the PWM Input:
  - o PWM Dimming
  - Analog Dimming
  - Mixed Dimming with 25% or 12.5% Transfer Point
- 15000:1 Dimming Ratio during PWM Dimming when f<sub>PWM</sub> ≤ 200Hz
- 200:1 Dimming Ratio during Analog Dimming via PWM Signal Input
- Excellent EMI Performance, Frequency Spread Spectrum
- I<sup>2</sup>C Interface, 3 Selectable IC Addresses
- Phase Shift Function for PWM Dimming
- 2.5% Current Matching
- Cycle-by-Cycle Current Limiting
- Disconnect V<sub>OUT</sub> from V<sub>IN</sub>
- Optional LED Current Auto-Decrement at High Temperatures
- LED Short Protection, LED Open Protection, Over-Temperature Protection (OTP), Over-Current Protection (OCP), and Inductor Short Protection
- Configurable LED Short Threshold and Over-Voltage (OV) Threshold
- Fault Indication Signal Output
- Available in a QFN-24 (4mmx4mm) Package
- Available in AEC-Q100 Grade 1

## **APPLICATIONS**

- Tablets
- Notebooks
- Automotive Displays

All MPS parts are lead-free, halogen-free, and adhere to the RoHS directive. For MPS green status, please visit the MPS website under Quality Assurance. "MPS", the MPS logo, and "Simple, Easy Solutions" are trademarks of Monolithic Power Systems, Inc. or its subsidiaries.

# EVQ3364-R-00A – 4-CHANNEL WLED DRIVER WITH I<sup>2</sup>C EVAL BOARD, AEC-Q100

# QUICK START GUIDE

- 1. Preset the power supply between 3.5V and 36V, then turn off the power supply.
- 2. Connect the LED load (4 strings) terminals to:
  - a. Positive (+): LED+
  - b. Negative (-): LED1~4 pins
- 3. Pull EN high to turn the converter on; pull EN low to turn it off.
- 4. Add a 100Hz to 20kHz PWM pulse frequency (f<sub>PWM</sub>) to the PWM terminal.

If using the I<sup>2</sup>C to set the IC functions, follow the additional steps below:

- Connect the SCL, SDA, and GND pins of the evaluation board to the SCL, SDA, and GND pins of the I<sup>2</sup>C kit (EVKT-USBI2C-02).
- 6. Write and read the registers:
  - a. Select the correct IC address.
  - b. Check that the I<sup>2</sup>C kit is communicating with the computer. If the message "USB is not connected" appears on the GUI <sup>(1)</sup>, then the I<sup>2</sup>C kit cannot communicate with the computer (see Figure 1). Otherwise, the communication should be functioning properly.
  - c. Select the parameters that are to be changed.
  - d. After setting the desired parameters, click the "WRITE ALL" button to send the data to the IC.
  - e. Click the "READ ALL" button and check that the data has been written to the IC.
