

14. har-flex® Connectors

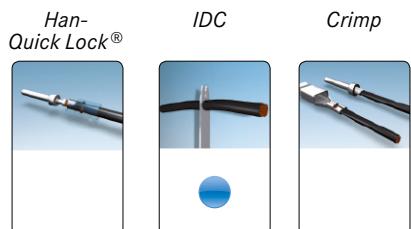

The continuous scalability by an even number of contacts, i.e. from 6 to 100, of the HARTING's har-flex® mezzanine connector series is a special feature forming an ideal basis for customized applications. The advantage is clearly evident considering that the connector is always optimized to suit specific applications on the device PCB, while also covering the medium- and small-scale volume range that is typical for the production of industrial devices.

Application profile:

CONNECTION TYPE		ENVIRONMENT		APPLICATION			high performance

har-flex® CONNECTORS

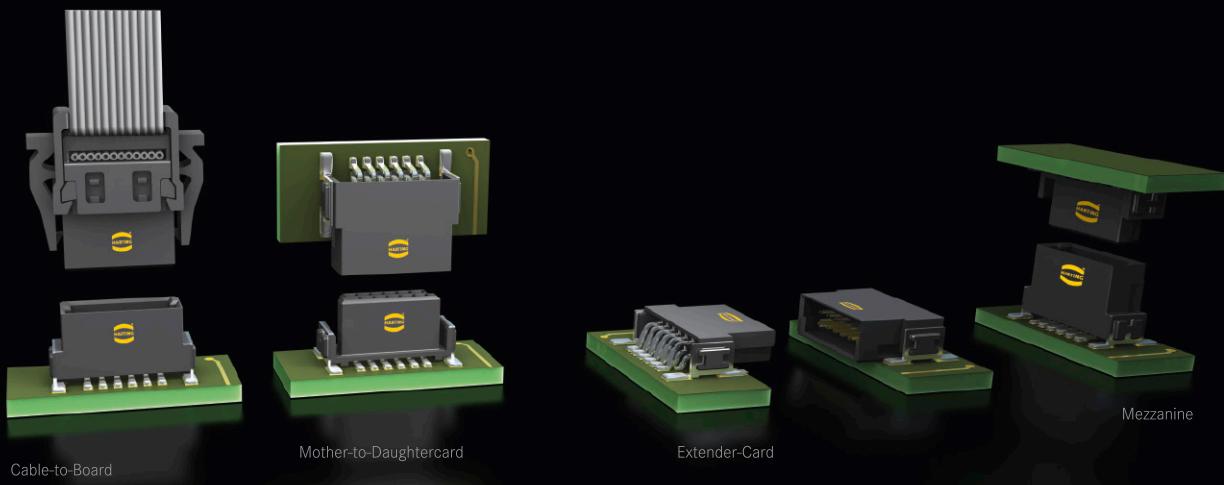

With *har-flex®*, HARTING has developed a general-purpose PCB connector series for internal and external Device Connectivity. The continuous scalability by an even number of contacts from 6 to 100 is a special feature forming an ideal basis for customized applications. The advantage is clearly evident considering that the connector is always optimized to suit specific applications on the device PCB, while also covering the medium and small scale volume range that is typical for the production of industrial devices.

This flexibility is new – HARTING turns an individual design into a standard component. No special tooling changes are needed for customer-specific solutions, thus HARTING can realize a short delivery time.

PRODUCT DIVERSITY

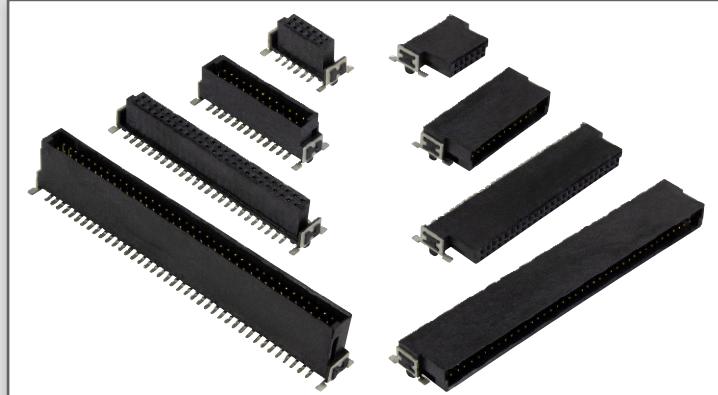

The *har-flex®* product range is based on a 1.27 mm grid. With its diverse variants, HARTING provides connectivity solutions for many different board-to-board and cable-to-board applications. For example, two straight connectors are used for mezzanine applications, two angled connectors for extender cards on one level, and a combination of straight and angled connectors allows the well-known pairing of mother and daughtercards. By using individually tailored IDC flat cables, it is possible to bridge long PCB distances.

Smaller, more powerful and more robust at the same time is the credo in all areas on the way to I4.0. Due to the miniaturized design and the high variability of the *har-flex®* connectors, device manufacturers have a freely scalable connection technology that meets the requirements of miniaturization.

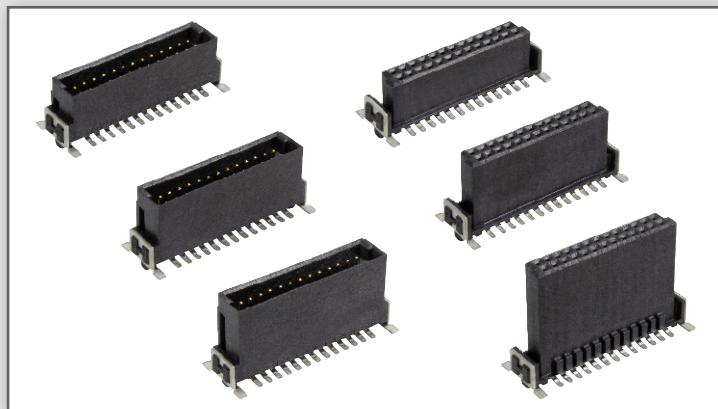

Variable pole counts for highest flexibility

- Male and female connectors with even pole counts from 6 to 100 contacts available
- This flexibility in the choice of number of contacts combined with high density contact spacing allows for an optimal use of PCB space, thereby achieving overall space savings and cost efficiencies

Flexible board-to-board distances

- Different stacking heights and a wiping length of 1.5 mm allow for (mezzanine) board-to-board distances from 8 to 20 mm

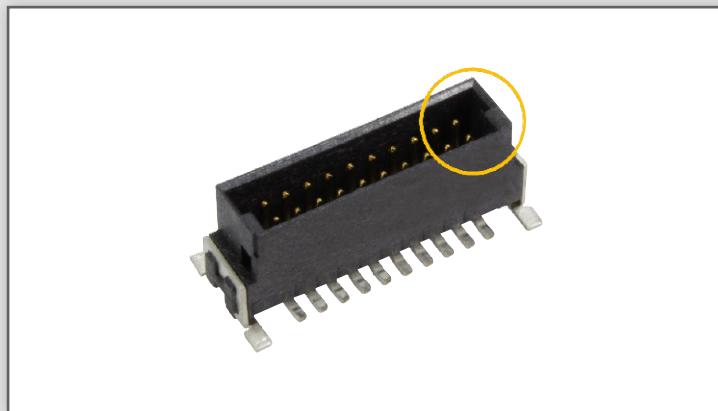

High-quality contacts for a high number of mating cycles

- Polished Performance Level 1 (PL1) contacts ensure reliable connections for up to 500 mating cycles
- A gas test after the initial 250 of 500 mating cycles ensures high quality and long-term reliability

Accurate mating process

- Mating profiles prevent mating in the opposite direction
- Slanted guidances compensate angle and center offsets and ensure a secure mating process

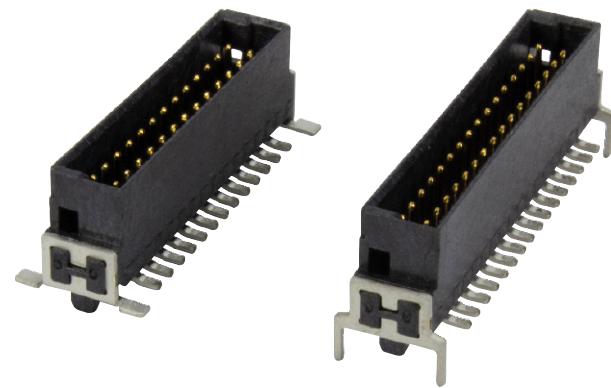

Advantages of the product range

Robust fixation on the PCB

- SMT and THR hold-downs allow for a robust mechanical fixation
- SMT hold-downs reduce the mechanical strain on the signal pins
- THR hold-downs are optionally available for strong protection against particularly high mechanical transverse forces

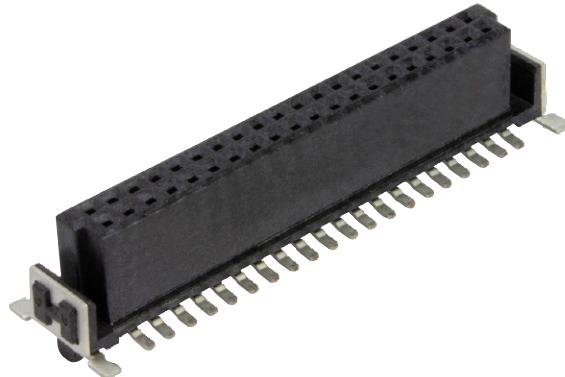

Secure handling of cable connectors

- Vibration-proof catch mechanism on both sides prevents accidental loosening
- Optional strain relief protects the IDC contacts against pulling forces
- Customized cable assemblies provide perfectly fitting solutions

Reliable soldering process

- A reliable soldering process is ensured by a contact coplanarity of ≤ 0.1 mm
- An optimal position on the PCB is achieved by guiding pegs

Automated processing features

- Tape & reel packaging provides protection during shipping and handling
- SMT and THR versions are suitable for automatic pick & place assembly and reflow soldering

Different types of cable

- Number of contacts: 6 - 100
- AWG 30/7
- Pitch: 0.635 mm
- Flame retardant acc. UL 758: VW-1
- Standard (PVC) Operating temperature: -20 °C ... +105 °C
- Halogen free (TPE) Operating temperature: -40 °C ... +125 °C

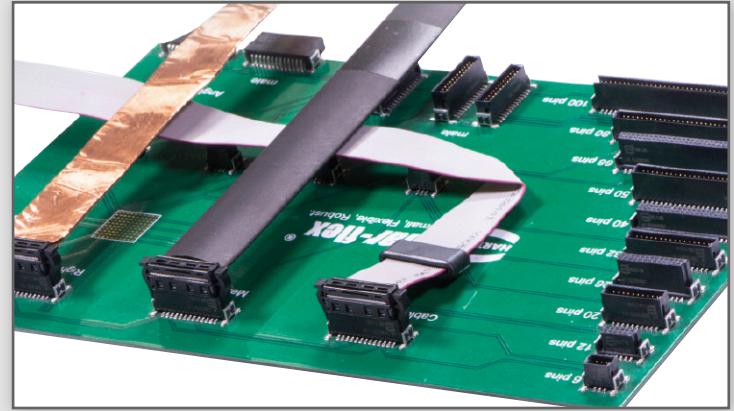

Customised

We can add value with:

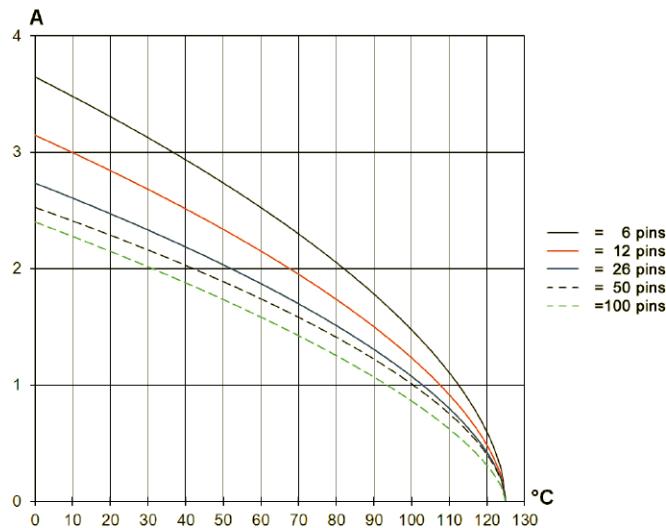

- Ferrit cores
- Shrinking tube
- Customised folding, customised labels

Your cable is not mentioned?

Don't be afraid. We will handle it. Please tell us your requirements.

Number of contacts	6, 8, 10 ... 96, 98, 100	Current carrying capacity acc. to IEC 60512-5-2
Connector pitch	1.27 mm x 1.27 mm [0.050" x 0.050"]	The current carrying capacity is limited by maximum temperature of materials for inserts and contacts including terminals. The current capacity-curve is valid for continuous, not interrupted current-loaded contacts of connectors when simultaneous power on all contacts is given, without exceeding the maximum temperature.
Clearance and creepage distance		Control and test procedures according to DIN IEC 60512-5-2.
Board connectors (SMT)	min. 0.4 mm	
Cable connectors (IDC)		
AWG 30/1 (solid)	min. 0.35 mm	
AWG 30/7 (stranded)	min. 0.4 mm	
Test voltage U _{r.m.s.}	500 V	
Contact resistance	< 25 mΩ	
Insulation resistance	> 10 GΩ	
Insertion and withdrawal force	approx. 0.5 N / contact	
Working temperature range		
for connectors:	– 55 °C ... + 125 °C	
for flat cable assembly:	depends on cable type	
The higher temperature limit includes the local ambient and heating effects of the contacts under load		
Temperature during reflow soldering (acc. to ECA/IPC/JEDEC J-STD-075 Level PSL R0)	min. 150 s > 217 °C min. 30 s > 240 °C	
Electrical termination		Durability
Board connectors	SMT (Surface Mount Technology) THR	Performance level 1 (recommended for majority of applications)
Cable connectors	IDC (Insulation Displacement Connection)	Initial 250 mating cycles, 10 days gas test (25 °C/75 % r.h.) using H ₂ S 10 ppb, NO ₂ 200 ppb, CL ₂ 10 ppb, SO ₂ 200 ppb. Measurement of contact resistance. The remaining 250 mating cycles are subject to measurement of contact resistance and visual inspection. No abrasion of the contact finish through to the base material. No functional impairment.
Materials		Part number definition: <input type="button" value="15"/> <input type="button" value=".."/> <input type="button" value="..."/> <input type="button" value="2..."/> <input type="button" value="..."/>
Moulding material	LCP	Performance level 2 (available on request)
UL approval	UL 94-V0	Initial 125 mating cycles, 4 days gas test (25 °C/75% r.h.) using H ₂ S 10 ppb, NO ₂ 200 ppb, CL ₂ 10 ppb, SO ₂ 200 ppb. Measurement of contact resistance. The remaining 125 mating cycles are subject to measurement of contact resistance and visual inspection. No abrasion of the contact finish through to the base material. No functional impairment.
CTI value (Comparative Tracking Index)	175	Part number definition: <input type="button" value="15"/> <input type="button" value=".."/> <input type="button" value="..."/> <input type="button" value="6..."/> <input type="button" value="..."/>
Contacts base material	Copper alloy	Performance level S4 (available on request)
Contact surface		Defined contact surface of min. 0.06 µm Au over 0.7+0.2 µm PdNi.

Board connectors (SMT / THR)	Sn	
Cable connectors (IDC)	Sn	

Derating curve @ I_{max} * 0.8 (IEC 60512-5-2)

Working voltage acc. to IEC 60664-1

The working voltage depends on user specific operational conditions. Depending on the installation category, the degree of pollution and the entire electrical environment, the working voltage is different. The standard IEC 60664-1 specifies, in general, the minimum insulation distances for equipment. But it can also be used to determine the maximum working voltage with given requirements.

The following table shows the most common conditions applicable for the har-flex® connectors and exemplary calculations for the working voltage. For installation category, degree of pollution and other requirements which are not shown in the table we refer to the IEC 60664-1.

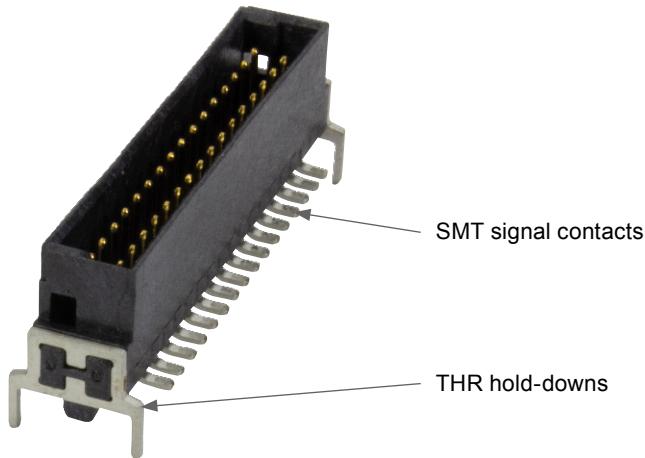

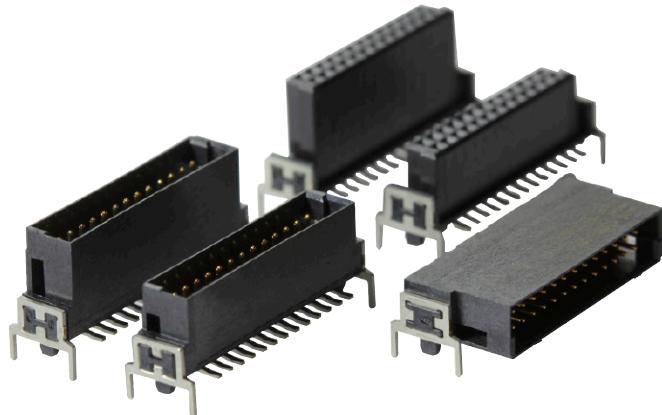

Clearance / Creepage distance	0.4 mm			
CTI-Value	< 400			
Isolation group	III a/b			
Electrical field type	Case A (Inhomogeneous field)		Case B (Homogeneous field)	
Installation category	I	II	I	II
Degree of pollution	1	1	1	1
Working voltage max.	150 V	100 V	150 V	150 V

Explanations:

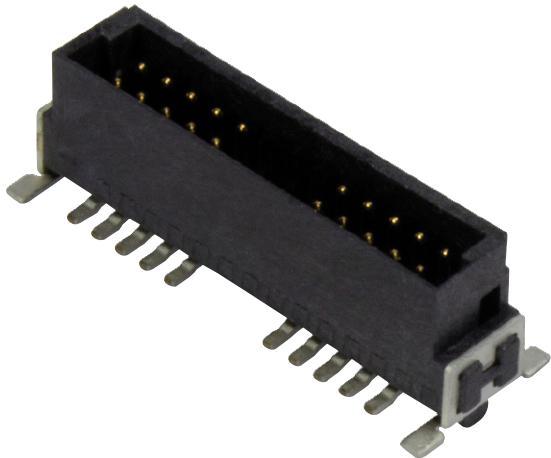

- CTI value and isolation group are fixed values by the har-flex® connector characteristics.
- Installation category I: Equipment is intended for use only in appliances or installation parts, in which no overvoltages can occur. Equipment in this installation category is normally operated at extra low voltage.
- Installation category II: Equipment is intended for use in installations or parts of installations, in which lightning overvoltages need not be considered. Overvoltages caused by switching must be taken into account.
- Pollution degree 1: No pollution or only dry, non-conductive pollution occurs. The pollution has no influence.
- Pollution degree 2: Only non-conductive pollution occurs. A temporary conductive caused by condensation must be expected occasionally.

har-flex® with THR hold-downs

THR stands for "Through Hole Reflow", which appropriately describes the underlying technology. While SMT (i.e. "Surface Mount Technology") connections are created by soldering the connector on the PCB surface during the reflow soldering process, THR means that the hold-down pins are inserted and soldered into designated holes on the PCB. This combines the fully automatic reflow soldering process with the advantages of traditional wave soldering: the inserted hold-down pins make the har-flex® more stable mechanically and more resilient to shear forces. This is especially relevant for PCB connectors and particularly for applications that require blind mating - meaning that the connectors are hidden from view during the mating process, which increases the chance of high mechanical stresses on the contacts. The resulting risk is mitigated by using hold-downs (additional mechanical fixing features). The optionally available THR hold-downs increase the robustness and reliability and protect the SMT signal contacts, which is particularly useful for angled connectors mounted on daughtercards, for example.

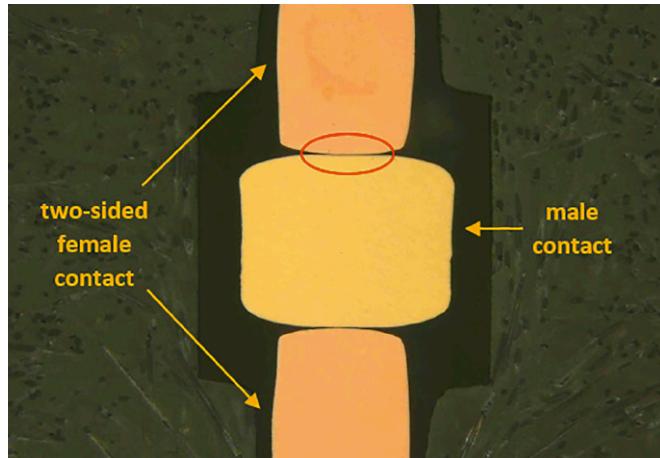

Partial loading

In specific cases it is possible that special requirements are not covered by the available standard variants. For example, it might be necessary to have a higher working voltage or allow for PCB traces under the connector. In such cases, it is possible to load the connector partially, i.e. leave out certain contact pins. By this means it is possible to increase the creepage and clearance distances and create free space for additional PCB tracks under the connector. HARTING offers the possibility to leave out one or several contacts in any position, which ensures a high degree of flexibility.

Reliable contacting

The production of stamped contacts has been one of HARTING's core competencies for a long time. HARTING leveraged this experience to create reliable contacts for *harflex®*. To achieve this goal, both a high-quality contacting area and a suitable plating are crucial in order to maintain the contacting functionality of the contact over the course of its lifetime. The female contact is made with high precision, and a special polishing process ensures a defined contacting area, so that the contact point features a particularly high quality. In conjunction with the standard plating for performance level 1 this method guarantees a reliable electric connection for at least 500 mating cycles.

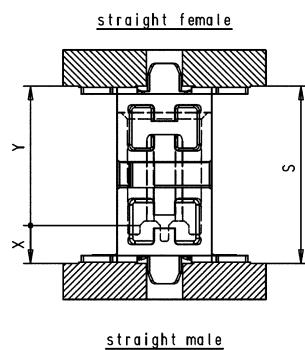

Stacking heights for mezzanine applications

Straight male and female har-flex® variants are available in three different stacking heights each. In conjunction with a wiping length of 1.5 mm these har-flex® variants can cover PCB distances from 8 to 20 mm in mezzanine applications.

Processing notes

The *har-flex®* SMT/THR connectors meet the highest demands in terms of their processing capabilities.

The connectors are delivered in a tape and reel packaging optimized for automatic assembly machines. A vacuum cover enables the automatic assembly with a vacuum nozzle.

The insulation body material is high temperature resistant, and due to the black colour a secure camera recognition is ensured.

To ensure a reliable reflow soldering process, the signal pins are 100 % checked for coplanarity.

Process / Moisture Sensitivity

During the reflow solder process, the connector has to resist extreme variations in temperature. Connectors consist in general of both plastic and metal parts, which have a different behaviour during the solder process. The Process Sensitivity and also the Moisture Sensitivity are tested according the ECA/IPC/JEDEC J-STD-075 specification.

Process Sensivity:

PSL means Process Sensitivity Level. PSL is a rating used to identify a component that is solder process sensitive. Damages of the connector after three times soldering are not permitted (e.g. melted edges).

Moisture Sensitivity:

MSL means Moisture Sensitivity Level. MSL is a rating indicating a component's susceptibility to damage due to absorbed moisture during storage. Damages of the connector after storage in damp heat and three times soldering are not permitted (e.g. blisters).

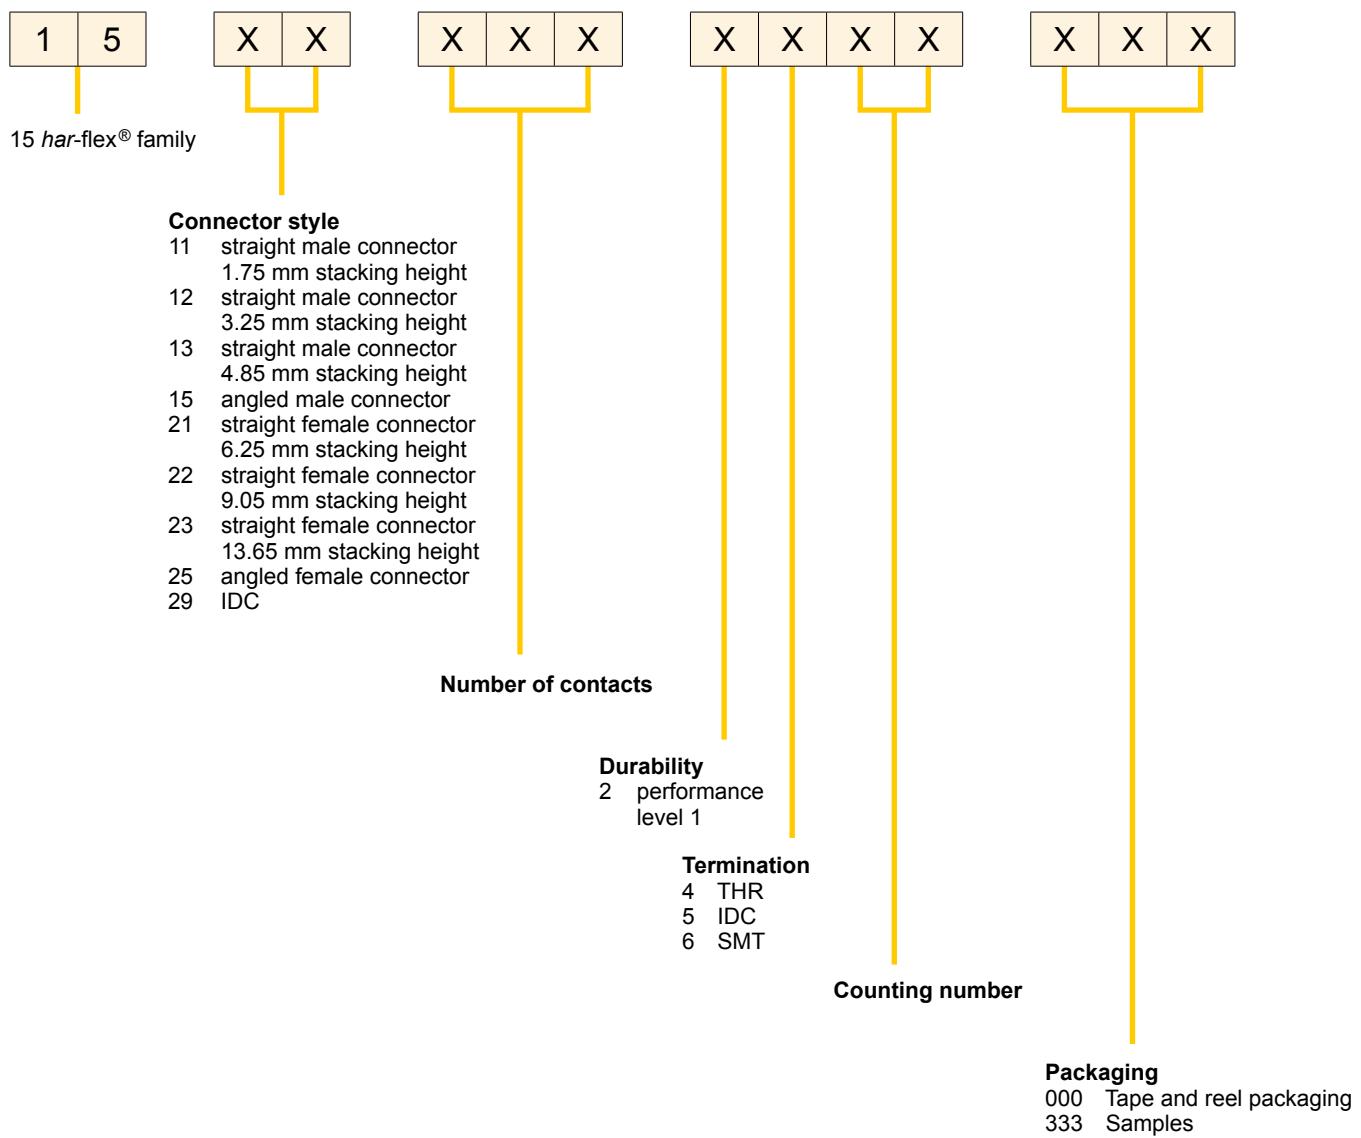

The *har-flex®* connectors are rated with **PSL R0** and **MSL 1**. This is the maximum possible rating in both categories. The *har-flex®* connector resists three times soldering at the following conditions without damages:

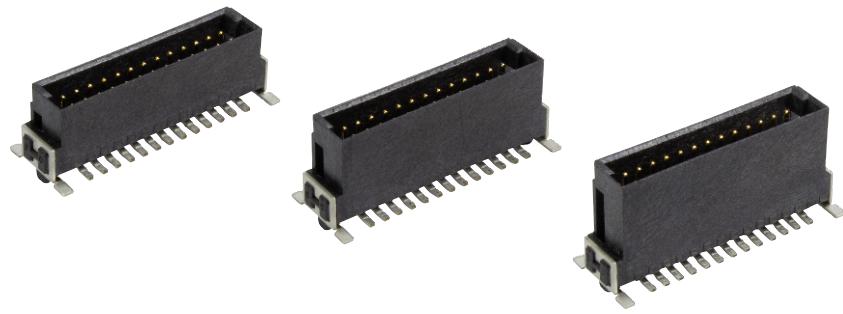

- min. 150 s beyond 217 °C (liquidus temperature, the melting point of the solder paste)
- min. 30 s beyond classification temperature (240 °C / 245 °C for *har-flex®*)
- Temperature solder profile according to ECA/IPC/JEDEC J-STD-075
- For MSL test, a storage of 168 hours at 85 °C and 85 % rel. humidity was carried out

As the result, the *har-flex®* connectors are not process sensitive and not moisture sensitive according to ECA/IPC/JEDEC J-STD-075.

Part number definition

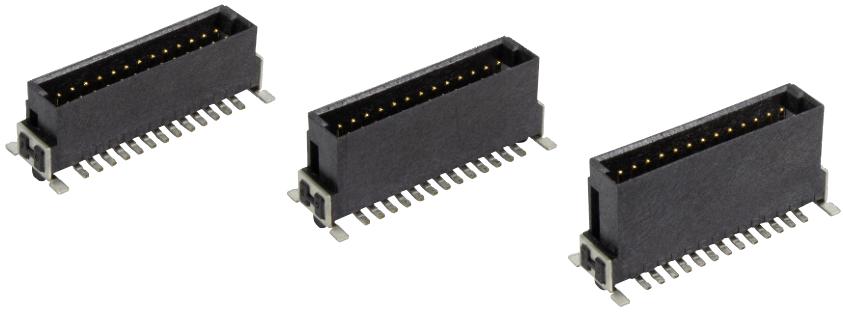

The har-flex® part numbers have 14 digits and are based on the following scheme:

Male connectors, straight, SMT

Strain reliefs for female connectors,
IDC

Identification	Drawing	Dimensions in mm
Dimensions		
6 – 58 contacts		
		15
60 – 100 contacts		
		16,2

Number of contacts	6, 8, 10 ... 96, 98, 100
Rated voltage	150 V
Core structure	AWG 30/7
Strain relief	with / without
Connector direction	same / different
Wiring	1 : 1 / crossed

Cable types

PVC

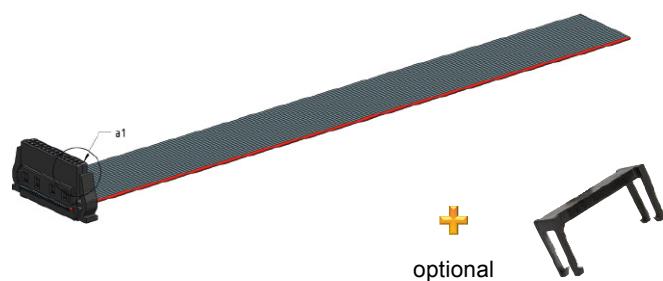

Operating temperatures -20 °C ... +105 °C

Halogen free

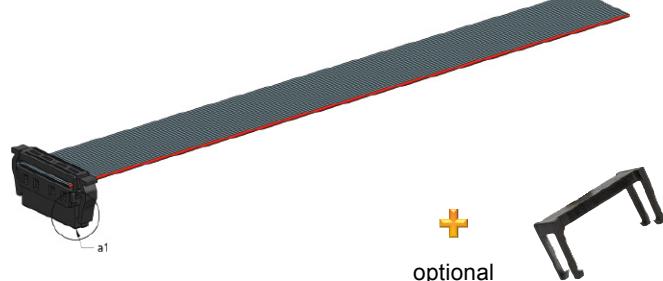

Operating temperatures -40 °C ... +125 °C
