

16.2kW 208V 3PH Switched PDU - LX Interface, Gigabit, 18 Outlets, IEC 309 60A Blue Input, Outlet Monitoring, LCD, 1.8 m Cord, 0U 1.8 m Height, TAA

MODEL NUMBER: PDU3EVSR6G60A

3-phase switched PDU distributes, monitors and manages power in a medium/large data center or network installation.

Features

3-Phase PDU Distributes, Monitors and Manages Network-Grade Power Recommended for data centers, server rooms and high-density network closets, this switched PDU provides advanced network control and remote power monitoring with the ability to turn on, turn off, reboot or lock out power to each outlet. You can more efficiently manage network power consumption and remotely reboot locked network items without having to visit the site. Reducing the number of on-site visits can help lower the cost of data center maintenance, thus lowering the 0U PDU's total cost of ownership.

18 Outlets Dispense AC Power to Connected Equipment During normal operation, 18 individually controllable outlets—six C13 and 12 C19—in six separately breakered load banks distribute AC power to rack equipment. Each 208V outlet is accompanied by an LED that illuminates when the outlet is ramped up and ready to be used. The outlets and banks can be individually monitored to ensure proper load balance and prevent downtime. Plug-lock insert sleeves are included to prevent connected cables from becoming accidentally dislodged.

Built-In GbE-Capable Network Management Card Allows Remote Access 24/7 The built-in WEBCARDLX with the latest version of PowerAlert Device Manager firmware (PADM20) provides enhanced remote management capabilities, including customizable dashboard graphs to fit user preferences. The PADM20 upgrade and Tripp Lite's PowerAlert Element Manager (PAEM) software form a powerful tool for expanding maintenance functions in large installations, including firmware update checks and backup and restoration of device configurations. PADM20's Auto Probe feature allows a PDU with switched loads to automatically reboot devices if a network communication failure is detected. This preserves uptime and minimizes the time and expense associated with on-site support.

Color Touchscreen LCD Offers Important Data at a Glance An easy-to-navigate color touchscreen LCD reports network data, input current level per phase, and output current per load bank and per outlet with $\pm 1\%$ billing-grade accuracy. It also generates a unique QR code to allow read-only access to the 3-phase PDU via mobile device. If an EnviroSense2 module is connected to the PDU, the LCD also displays its status and environmental data, such as temperature and humidity.
