

variable speed drive ATV32 - 3 kw - 400 V - 3 phase - with heat sink

ATV32HU30N4

Discontinued on: 31 December 2017

• End-of-service on: 31 December 2018

! Discontinued

Main

Range of product	Altivar 32
Product or component type	Variable speed drive
Product destination	Asynchronous motors Synchronous motors
Product specific application	Complex machines
Function available	-
Assembly style	With heat sink
Component name	ATV32
EMC filter	Class C2 EMC filter integrated
Network number of phases	3 phases
[Us] rated supply voltage	380500 V - 1510 %
Supply voltage limits	323550 V
Supply frequency	5060 Hz - 55 %
Network frequency	47.563 Hz
Motor power kW	3 kW at 380480 V

Complementary

Line current	11.1 A for 380 V 3 phases 3 kW 8.4 A for 500 V 3 phases 3 kW
Apparent power	7.3 kVA at 500 V 3 phases 3 kW
Prospective line Isc	5 kA for 3 phases
Nominal output current	7.1 A at 4 kHz 500 V 3 kW
Maximum transient current	10.7 A for 60 s 3 kW
Output frequency	0.00050.599 kHz
Nominal switching frequency	4 kHz
Switching frequency	216 kHz adjustable
Speed range	1100 for asynchronous motor in open-loop mode
Speed accuracy	+/- 10 % of nominal slip 0.2 Tn to Tn
Torque accuracy	+/- 15 %

Transient overtorque	170200 %
Braking torque	<= 170 % with braking resistor
Asynchronous motor control profile	Voltage/frequency ratio, 5 points Voltage/frequency ratio, 2 points Flux vector control without sensor, standard Voltage/frequency ratio - Energy Saving, quadratic U/f Flux vector control without sensor - Energy Saving, NoLoad law
Synchronous motor control profile	Vector control without sensor
Regulation loop	Adjustable PID regulator
Motor slip compensation	Automatic whatever the load Not available in voltage/frequency ratio (2 or 5 points) Adjustable 0300 %
Local signalling	1 LED red for drive voltage 1 LED green for CANopen run 1 LED red for CANopen error 1 LED red for drive fault
Output voltage	<= power supply voltage
Noise level	45 dB conforming to 86/188/EEC
Insulation	Electrical between power and control
Electrical connection	Screw terminal, clamping capacity: 0.51.5 mm², AWG 18AWG 14 (control) Removable screw terminals, clamping capacity: 1.52.5 mm², AWG 14AWG 12 (motor/braking resistor) Screw terminal, clamping capacity: 1.54 mm², AWG 14AWG 10 (power supply)
Tightening torque	0.5 N.m, 4.4 lb/ft (control) 0.7 N.m, 7.1 lb/ft (motor/braking resistor) 0.6 N.m, 5.3 lb/ft (power supply)
Supply	Internal supply for reference potentiometer (1 to 10 kOhm): 10.5 V DC +/- 5% , <10 mA, protection types overload and short-circuit protection
Analogue input number	3
Analogue input type	Al1 voltage: 010 V DC, impedance: 30000 Ohm, resolution 10 bits Al2 bipolar differential voltage: +/- 10 V DC, impedance: 30000 Ohm, resolution 10 bits Al3 current: 020 mA (or 4-20 mA, x-20 mA, 20-x mA or other patterns by configuration), impedance: 250 Ohm, resolution 10 bits
Sampling duration	2 ms (Al1, Al2, Al3) - analog input(s) 2 ms (AO1) - analog input(s)
Response time	LI1LI6 8 ms, tolerance +/- 0.7 ms for logic output(s) R1A, R1B, R1C 2 ms for relay output(s) R2A, R2C 2 ms for relay output(s)
Accuracy	+/- 0.2 % (AI1, AI2, AI3) for a temperature of -1060 °C +/- 0.5 % (AI1, AI2, AI3) for a temperature of 25 °C +/- 1 % (AO1) for a temperature of 25 °C +/- 2 % (AO1) for a temperature of -1060 °C
Linearity error	+/- 0.20.5 % of maximum value (Al1, Al2, Al3) +/- 0.3 % (AO1)
Analogue output number	1
Analogue output type	AO1 software-configurable current 020 mA, impedance: 800 Ohm, resolution 10 bits AO1 software-configurable voltage 010 V, impedance: 470 Ohm, resolution 10 bits
Discrete output number	3
Discrete output type	Configurable relay logic: (R1A, R1B, R1C) NO/NC - 100000 cycles Configurable relay logic: (R2A, R2B) NO - 100000 cycles Logic: (LO)
Minimum switching current	5 mA at 24 V DC for configurable relay logic
Maximum switching current	R1: 3 A at 250 V AC resistive load, cos phi = 1 R1: 4 A at 30 V DC resistive load, cos phi = 1 R1, R2: 2 A at 250 V AC inductive load, cos phi = 0.4 R1, R2: 2 A at 30 V DC inductive load, cos phi = 0.4 R2: 5 A at 250 V AC resistive load, cos phi = 1 R2: 5 A at 30 V DC resistive load, cos phi = 1
Discrete input number	7
Discrete input type	Programmable (sink/source) (LI1LI4)2430 V DC, with level 1 PLC Programmable as pulse input 20 kpps (LI5)2430 V DC, with level 1 PLC Switch-configurable PTC probe (LI6)2430 V DC

Mounting and Clearance

Mounting and Clearance

- Minimum value corresponding to thermal constraints. A 150 mm clearance may help to connect the ground. Optional GV2 circuit-breaker
- (1) (2)

ATV32HU30N4

Mounting and Clearance

Option: Protection Device, GV2 circuit-breaker

The drive is prepared to be equipped with an optional GV2 circuit-breaker.

The GV2 circuit-breaker is directly mounted on the drive. Mechanical and electrical link are made using the optional adapter. The options are supplied with detailed mounting instruction sheet.

NOTE: The product overall dimension, including GV2 adapter and EMC plate mounted, becomes 424 mm (16.7 in.)

(1) Ground screw (HS type 2 - 5x12)

ATV32HU30N4

Connections and Schema

Connection Diagrams

Single or Three-phase Power Supply - Diagram with Line Contactor

Connection diagrams conforming to standards EN 954-1 category 1 and IEC/EN 61508 capacity SIL1, stopping category 0 in accordance with standard IEC/EN 60204-1.

- Line choke (if used)
- (1) (3) Fault relay contacts, for remote signaling of drive status

Single or Three-phase Power Supply - Diagram with Switch Disconnect

Connection diagrams conforming to standards EN 954-1 category 1 and IEC/EN 61508 capacity SIL1, stopping category 0 in accordance with standard IEC/EN 60204-1.

- Line choke (if used)
- Fault relay contacts, for remote signaling of drive status

Diagram with Preventa Safety Module (Safe Torque Off Function)

Connection diagrams conforming to standards EN 954-1 category 3 and IEC/EN 61508 capacity SIL2, stopping category 0 in accordance with standard IEC/EN 60204-1.

When the emergency stop is activated, the drive power supply is cut immediately and the motor stops in freewheel, according to category 0 of standard IEC/EN 60204-1.

A contact on the Preventa XPS AC module must be inserted in the brake control circuit to engage it safely when the STO (Safe Torque Off) safety function is activated.

- (1) Line choke (if used)(2) It is essential to con
- (2) It is essential to connect the shielding to the ground.
- (3) Fault relay contacts, for remote signaling of drive status

The STO safety function integrated into the product can be used to implement an "EMERGENCY STOP" (IEC 60204-1) for category 0 stops. With an additional, approved EMERGENCY STOP module, it is also possible to implement category 1 stops.

STO function

The STO safety function is triggered via 2 redundant inputs. The circuits of the two inputs must be separate so that there are always two channels. The switching process must be simultaneous for both inputs (offset < 1 s).

The power stage is disabled and an error message is generated. The motor can no longer generate torque and coasts down without braking. A restart is possible after resetting the error message with a "Fault Reset".

The power stage is disabled and an error message is generated if only one of the two inputs is switched off or if the time offset is too great. This error message can only be reset by switching off the product.

Diagram without Preventa Safety Module

Connection diagrams conforming to standards EN 954-1 category 2 and IEC/EN 61508 capacity SIL1, stopping category 0 in accordance with standard IEC/EN 60204-1.

The connection diagram below is suitable for use with machines with a short freewheel stop time (machines with low inertia or high resistive torque).

When the emergency stop is activated, the drive power supply is cut immediately and the motor stops in freewheel, according to category 0 of standard IEC/EN 60204-1.

- (1) Line choke (if used)
- (2) It is essential to connect the shielding to the ground.
- (3) Fault relay contacts, for remote signaling of drive status

The STO safety function integrated into the product can be used to implement an "EMERGENCY STOP" (IEC 60204-1) for category 0 stops.

ATV32HU30N4

Performance Curves

Derating Curves

Derating curve for the nominal drive current (In) as a function of temperature and switching frequency.

Above 4 kHz, the drive will reduce the switching frequency automatically in the event of an excessive temperature rise.

ATV32HU30N4

Technical Description

Sink / Source Switch Configuration (SW1)

The logic input switch (SW1) is used to adapt the operation of the logic inputs to the technology of the programmable controller outputs. Switch SW1 set to "Source" position

Switch SW1 set to "Source" position and use of an external power supply for the LIs

Switch SW1 set to "Sink Int" position

Switch SW1 set to "Sink Ext" position
