Based on the DA14531 with a powerful 32-bit Arm Cortex-M0+, integrated memories and a complete set of analog and digital peripherals, SmartBond TINY™ module is extremely power efficient. The DA14531's architecture and resources allow it to be used as a standalone wireless microcontroller or as a Bluetooth LE data pipe extension to designs with existing microcontrollers. It is complemented by a flexible Software Development Kit (SDK) supporting major compilers such as Keil® and GCC out of the box. For simple applications, the Dialog CodeLess software will allow development without writing software code at all, using a comprehensive set of AT commands and pushing the boundaries of ease of use to the next level.
