NCV8537

Linear Regulator - High Accuracy, Low Dropout, Power Good Function

500 mA

The NCV8537 is a high performance low dropout linear voltage regulator. Based on the popular NCV8535, the device retains all the best features of its predecessor which includes high accuracy, excellent stability, low noise performance and reverse bias protection but now includes a Power Good output signal to enable monitoring of the supply system. The device is available with fixed or adjustable outputs and is packaged in a 10 pin 3x3 mm DFN package.

Features

- High Accuracy Output Over Line and Load Variances (±0.9% at 25°C)
- Operating Temperature Range: −40°C to 125°C
- Power Good Output to Indicate the Regulator is Within Specified Limits
- Stable Output with Low Value Capacitors of any type and with no Minimum Load Current Requirement
- Incorporates Current Limiting and Reverse Bias Protection
- Thermal Shutdown Protection
- Low Dropout Voltage at Full Load (340 mV typ at V_o = 3.3 V)
- Low Noise (33 μVrms w/ 10 nF C_{nr} and 52 μVrms w/out C_{nr})
- Low Shutdown Current (< 1 mA)
- Reverse Bias Protected
- 2.9 V to 12 V Supply Range
- Available in 1.8 V, 2.5 V, 3.3 V, 5.0 V and Adjustable Output Voltages
- NCV Prefix for Automotive and Other Applications Requiring Unique Site and Control Change Requirements; AEC−Q100 Qualified and PPAP Capable
- These are Pb−Free Devices

Applications

- Networking Systems, DSL/Cable Modems
- Audio Systems for Automotive Applications
- Navigation Systems
- Satellite Receivers

PIN FUNCTION DESCRIPTION

Pin No.	Pin Name	Description
1, 2	V_{out}	Regulated output voltage. Bypass to ground with $C_{out} \geq 1.0\ \mu F$
3	SENSE/ADJ	For output voltage sensing, connect to Pins 1 and 2.at Fixed output Voltage version Adjustable pin at Adjustable output version
4	GND	Power Supply Ground
5	PWRG	Power Good
6	NC	Not Connected
7	NR	Noise Reduction Pin. This is an optional pin used to further reduce noise.
8	$\overline{SD}$	Shutdown pin. When not in use, this pin should be connected to the input pin.
9, 10	V_{in}	Power Supply Input Voltage
EPAD	EPAD	Exposed thermal pad should be connected to ground.

MAXIMUM RATINGS

Rating	Symbol	Value	Unit
Input Voltage	V_{in}	−0.3 to +16	V
Output Voltage	V_{out}	−0.3 to V_{in} +0.3 or 10 V*	V
PWRG Pin Voltage	V_{PWRG}	−0.3 to +16	V
Shutdown Pin Voltage	V_{sh}	−0.3 to +16	V
Junction Temperature Range	T_J	−40 to +150	°C
Storage Temperature Range	T_{stg}	−50 to +150	°C

Stresses exceeding those listed in the Maximum Ratings table may damage the device. If any of these limits are exceeded, device functionality should not be assumed, damage may occur and reliability may be affected.

NOTE: This device series contains ESD protection and exceeds the following tests:
Human Body Model (HBM) tested per AEC−Q100−002 (EIA/JESD22−A114)
Machine Model (MM) tested per AEC−Q100−003 (EIA/JESD22−A115)
Charged Device Model (CDM) tested per EIA/JESD22−C101.

*Which ever is less. Reverse bias protection feature valid only if ($V_{out} - V_{in}$) ≤ 7 V.

THERMAL CHARACTERISTICS

Characteristic	Test Conditions (Typical Value)		Unit
	Min Pad Board (Note 1)	**1″ Pad Board** (Note 1)	
Junction−to−Air, θJA	215	66	°C/W
Junction−to−Pin, J−L4	58	18	°C/W

1. As mounted on a 35 x 35 x 1.5 mm FR4 Substrate, with a single layer of a specified copper area of 2 oz (0.07 mm thick) copper traces and heat spreading area. JEDEC 51 specifications for a low and high conductivity test board recommend a 2 oz copper thickness. Test conditions are under natural convection or zero air flow.

ELECTRICAL CHARACTERISTICS – 1.8 V

(V_{out} = 1.8 V typical, V_{in} = 2.9 V, T_A = −40°C to +125°C, unless otherwise noted, Note 2)

Characteristic	Symbol	Min	Typ	Max	Unit
Output Voltage (Accuracy) V_{in} = 2.9 V to 5.8 V, I_{load} = 0.1 mA to 500 mA, T_A = 25°C	V_{out}	−0.9% 1.783	1.8	+0.9% 1.817	V
Output Voltage (Accuracy) V_{in} = 2.9 V to 5.8 V, I_{load} = 0.1 mA to 500 mA, T_A = 0°C to +85°C	V_{out}	−1.4% 1.774	1.8	+1.4% 1.826	V
Output Voltage (Accuracy) V_{in} = 2.9 V to 5.8 V, I_{load} = 0.1 mA to 500 mA, T_A = −40°C to +125°C	V_{out}	−1.5% 1.773	1.8	+1.5% 1.827	V
Minimum Input Voltage	V_{inmin}		2.9		V
Line Regulation V_{in} = 2.9 V to 12 V, I_{load} = 0.1 mA	$Line_{Reg}$		0.04		mV/V
Load Regulation V_{in} = 2.9 V, I_{load} = 0.1 mA to 500 mA	$Load_{Reg}$		0.04		mV/mA
Dropout Voltage (See Figure 9) I_{load} = 500 mA (Notes 3, 4) I_{load} = 300 mA (Notes 3, 4) I_{load} = 50 mA (Notes 3, 4)	V_{DO}		 620 230 95		mV
Peak Output Current (See Figures 14 and 17)	I_{pk}	500	700	830	mA
Short Output Current (See Figure 14) V_{in} < 7 V, T_A = 25°C	I_{sc}			900	mA
Thermal Shutdown / Hysteresis	T_J		160/10		°C
Ground Current In Regulation I_{load} = 500 mA (Note 3) I_{load} = 300 mA (Note 3) I_{load} = 50 mA I_{load} = 0.1 mA In Dropout V_{in} = 2.2 V, I_{load} = 0.1 mA In Shutdown V_{SD} = 0 V	I_{GND} I_{GNDsh}		 9.0 4.6 0.8 – 	 14 7.5 2.5 220 500 1.0	 mA μA μA μA
Output Noise C_{nr} = 0 nF, I_{load} = 500 mA, f = 10 Hz to 100 kHz, C_{out} = 10 μF C_{nr} = 10 nF, I_{load} = 500 mA, f = 10 Hz to 100 kHz, C_{out} = 10 μF	V_{noise}		 52 33		 μVrms μVrms
Power Good Voltage Low Threshold Hysteresis High Threshold	V_{elft}	 93	 95 2 97	 99	% of V_{out}
Power Good Pin Voltage Saturation (I_{ef} – 1.0 mA)	V_{efdo}		200		mV
Power Good Pin Leakage	I_{efleak}		1.0		μA
Power Good Blanking Time (Note 7)	t_{ef}		50		μs
Shutdown Threshold Voltage ON Threshold Voltage OFF	V_{SD}	 2.0		 0.4	 V V
SD Input Current, V_{SD} = 0 V to 0.4 V or V_{SD} = 2.0 V to V_{in}	I_{SD}		0.07	1.0	μA
Output Current In Shutdown Mode, V_{out} = 0 V	I_{OSD}		0.07	1.0	μA
Reverse Bias Protection, Current Flowing from the Output Pin to GND (V_{in} = 0 V, V_{out_forced} = 1.8 V)	I_{OUTR}		10		μA

2. Performance guaranteed over the operating temperature range by design and/or characterization, production tested at $T_J = T_A$ = 25°C. Low duty cycle pulse techniques are used during testing to maintain the junction temperature as close to ambient as possible.
3. T_A must be greater than 0°C.
4. Maximum dropout voltage is limited by minimum input voltage V_{in} = 2.9 V recommended for guaranteed operation.

ELECTRICAL CHARACTERISTICS – 2.5 V

(V_{out} = 2.5 V typical, V_{in} = 2.9 V, T_A = −40°C to +125°C, unless otherwise noted, Note 5)

Characteristic	Symbol	Min	Typ	Max	Unit
Output Voltage (Accuracy) V_{in} = 2.9 V to 6.5 V, I_{load} = 0.1 mA to 500 mA, T_A = 25°C	V_{out}	−0.9% 2.477	2.5	+0.9% 2.523	V
Output Voltage (Accuracy) V_{in} = 2.9 V to 6.5 V, I_{load} = 0.1 mA to 500 mA, T_A = 0°C to +85°C	V_{out}	−1.4% 2.465	2.5	+1.4% 2.535	V

APPLICATIONS INFORMATION

Reverse Bias Protection

Reverse bias is a condition caused when the input voltage goes to zero, but the output voltage is kept high either by a large output capacitor or another source in the application which feeds the output pin.

Normally in a bipolar LDO all the current will flow from the output pin to input pin through the PN junction with limited current capability and with the potential to destroy the IC.

Due to an improved architecture, the NCV8537 can withstand up to 7.0 V on the output pin with virtually no current flowing from output pin to input pin, and only negligible amount of current (tens of μA) flowing from the output pin to ground for infinite duration.

Input Capacitor

An input capacitor of at least 1.0 μF, any type, is recommended to improve the transient response of the regulator and/or if the regulator is located more than a few inches from the power source. It will also reduce the circuit's sensitivity to the input line impedance at high frequencies. The capacitor should be mounted with the shortest possible track length directly across the regular's input terminals.

Output Capacitor

The NCV8537 remains stable with any type of capacitor as long as it fulfills its 1.0 μF requirement. There are no constraints on the minimum ESR and it will remain stable up to an ESR of 5.0 Ω. Larger capacitor values will improve the noise rejection and load transient response.

Noise Reduction Pin

Output noise can be greatly reduced by connecting a 10 nF capacitor (C_{nr}) between the noise reduction pin and ground (see Figure 1). In applications where very low noise is not required, the noise reduction pin can be left unconnected.

Dropout Voltage

The voltage dropout is measured at 97% of the nominal output voltage.

Thermal Considerations

Internal thermal limiting circuitry is provided to protect the integrated circuit in the event that the maximum junction temperature is exceeded. This feature provides protection from a catastrophic device failure due to accidental overheating. This protection feature is not intended to be used as a substitute to heat sinking. The maximum power that can be dissipated, can be calculated with the equation below:

$$P_D = \frac{T_{J(max)} - T_A}{R_{\theta JA}} \quad \text{(eq. 1)}$$

For improved thermal performance, contact the factory for the DFN package option. The DFN package includes an exposed metal pad that is specifically designed to reduce the junction to air thermal resistance, $R_{\theta JA}$.

Adjustable Operation

The output voltage can be set by using a resistor divider as shown in Figure 2 with a range of 1.25 to 10 V. The appropriate resistor divider can be found by solving the equation below. The recommended current through the resistor divider is from 10 μA to 100 μA. This can be accomplished by selecting resistors in the kΩ range. As result, the I_{adj} * R2 becomes negligible in the equation and can be ignored.

$$V_{out} = 1.25 * (1 + R3/R2) + I_{adj} * R2 \quad \text{(eq. 2)}$$

Power Good Operation

The Power Good pin on the NCV8537 will produce a logic Low when it drops below the nominal output voltage. Refer to the electrical characteristics for the threshold values at which point the Power Good goes Low. When the NCV8537 is above the nominal output voltage, the Power Good will remain at logic High.

The external pullup resistor needs to be connected between V_{in} and the Power Good pin. A resistor of approximately 100 kΩ is recommended to minimize the current consumption. No pullup resistor is required if the Power Good output is not being used. The Power Good does not function during thermal shutdown and when the part is disabled.

ORDERING INFORMATION
